Assistant Public Prosecutor

Passage:

India's gross domestic product (GDP) grew by 7.3 per cent during 2014-15, according to the official data. The figure fell short of the 7.4 per cent predicted by the Central Statistical Organisation (CSO). This is certainly a creditable achievement when the growth rate in many developed countries is not even half of it. However, what is most distressing is that the growth rate in the agriculture sector was a negligible 0.2 per cent during the same period. Had it performed better, the overall growth rate would have been far more creditable. As a majority of the people still depends on agriculture for their livelihood, the niggardly growth rate is nothing but a national disaster the consequences of which are difficult to be visualised.

That the agricultural sector is in distress and some of the farmers are even forced to commit suicide is no news. The fact is that little has so far been done to strengthen agriculture. It is also well known that the agricultural output has close relations with the climatic conditions. The recent unseasonal rains in many parts of India, followed by searing heat wave conditions, have caused extensive damage to the crops. In the weeks to come, demands for waiving of agricultural loans and increasing the procurement prices of food grains are bound to be taken up by political leaders. Eventually, the government would be forced to concede some of their demands.

Needless to say, this will not help the agricultural sector to regain health. Instead, it will only perpetuate the dependency of the farmer on government subsidy, a problem that needs to be addressed in right earnest. What is needed is a shift in emphasis-from subsidy to investment. It is a fact that agriculture has not seen any investment worth the name during the last few decades. In fact, after the success of the Green Revolution, this sector has not seen much investment. Cold storages that can protect perishable commodities like potato and onion and warehouses where grains can be kept protected from rains and moisture are just two areas where heavy investment is required. The insurance industry can be encouraged to come up with crop insurance policies which are imaginatively conceived to meet the needs of the farmer. If this kind of structural change is not attempted, Indian agriculture will remain moribund and the farmers will continue to wallow in distress.

Passage:

In a big step towards resolution of bad loans, Indian banks, Reserve Bank of India and the union finance ministry are discussing setting up two special funds to resurrect troubled investments through equity infusion or more debt funds. The two funds proposed are Stressed Assets Equity Fund and Stressed Assets Lending Fund. "Creation of separate funds for resolution of stressed assets is being worked out. Indian Banks' Association (IBA) is finalizing the road map," adding the corpus of these two funds will be fluid and will take case-specific action.

According to RBI data, the stressed assets ratio for the banking sector, which includes gross non-performing assets (NPAs), increased to 14.5% at the end of December 2015 as against 9.8% at the end of March 2012. State-run banks have the highest share in stressed loans. Their gross NPAs or bad loans alone rose from Rs 2.67 lakh crore in March 2015 to Rs 3.61 lakh crore in December. A senior official with IBA said that the stressed assets equity fund (SAEF) will invest in equity of stressed borrower bringing equity to burdened projects. "It may take controlling stake either directly or through strategic debt restructuring scheme (SDR)," he said.

The other fund named stressed assets lending fund (SALF) will provide last mile funding or working capital funding to assets in trouble because of funding constraints. "An oversight committee will be formed to look into cases where these funds will invest. Discussions are on to work out the modalities," said the above quoted government official. Earlier this month, RBI had come out with a scheme for sustainable structuring of stressed assets, also termed as S4A, to strengthen the lenders' ability to deal with stressed assets and provide an avenue for reworking the financial structure of entities facing genuine difficulties. "The S4A envisages determination of the sustainable debt level for a stressed borrower and bifurcation of the outstanding debt into sustainable debt and equity/quasi-equity instruments which are expected to provide upside to the lenders when the borrower turns around," the RBI had noted in a statement.
